

Edgecam Solid Machinist

Edgecam Solid Machinist® is a powerful and seamlessly integrated CAM system for generating milling and turning machining strategies and NC code from solid models. Files from all major CAD systems, including Autodesk Inventor®, SolidWorks®, Solid Edge®, Unigraphics NX®, CATIA V5® and Pro/ENGINEER can be opened directly in Edgecam, where a wide range of innovative features offers a fast and reliable route to manufacture.

Within Edgecam, the integrity of your design is maintained because the solid model is imported without translation.

Edgecam Solid Machinist uses automatic feature recognition to interrogate the solid model and quickly identify machineable features. Edgecam then offers the user the most appropriate tooling and machining strategy to generate accurate toolpaths.
